

what's new in

EnRoute

subscriptions

1

Drag Knife Tool

Easily define your tool and then create toolpaths for cutting out complex geometry in an interesting new way.

2

New Backplot

Lets you preview output before sending to a machine, see four views at a time and provides detailed cut statistics.

3

Job Statistics

Closely emulate the movement of your machine and better calibrate the estimator to give you improved estimates of cutting time for planning and pricing.

4

Order by Line

Define an object cutting order graphically rather than requiring you to click through menu options.

5

Group Order

Easily set the order of objects in a group as another way to control the cutting order of toolpaths.

6

Hotfolder

EnRoute's new ability to utilize a Hotfolder for creating output files can help speed up production, automatically name files and send output to a predefined folder.
